\$125 a boot
(\$250 pair)

Gel pads \$27.50 pair | Pastern Wraps \$27.50 pair | Studs \$22 pack of 12

Cavallo Hoof Boots have been on many adventures and trail rides, offering good sole protection. They are faithful, easy to put on and comfortable for your horse. These boots will suit hooves where the width and length is no more than two sizes different (you will need the larger size). The sizes already allow for some growth and there are 4 styles:-

Simple Boot: made of leather and durable sole. A left and right boot.

Sport Boot: made of durable denier with a leather collar. A left and right boot.

Trek Regular Boot: Same sole as the Simple boot. Same in length as in width

Trek Slim Boot: Same sole as the Sport boot so 5mm narrower in width.

Trek boots are sold singularly and there is no left or right, and have a lower profile than the Sport or the Simple. Both styles have a soft foam collar and Pro Mesh upper optimising strength and minimising weight. Each Trek boot comes with a spare strap.

The **Ultimate boot** comes in a tiny size 7 up to a whopping size 16. This boot has combined features of both the original Ultra and Performance. It is secured with Velcro. Sold individually with no left or right boot. Also available with red panels. **\$130 each (\$260 pair)** Slim models being released through 2015.

The **All Terrain** has all the features of the Ultimate boot above, with a thicker sole base to give grip on all surfaces. **\$145 each (\$290 pair)**

The Original Jogging Shoe, the **Ultra**, and the **Performance** are also still available. In sizes 10 to 15. Sold in pairs \$240.00

EQUINE FUSION

Size	Ultimate & All Terrain Hoof Length/width (mm)
7	66 - 75 / 70
8	76 - 85 / 80
9	86 - 95 / 90

Measure with bandages:-
Small 90mm-125mm
Medium 115mm-140mm
Large 140mm-205mm

\$45-\$50

Hoof Boots....Why? Why not!

Measuring the hoof:-

If you don't trim the hooves yourself or tidy up between farrier visits, then it is best to measure your horses hooves about 2-3 weeks after a trim if on a 4-6 week cycle.

Width— As in figure 1 measure the hoof at the widest part across the hoof (usually quarters).

Length— As in figure 2 draw an imaginary line between the heels from where heel buttress hits the ground and from there down the centre of the frog to the toe (centre front of the hoof).

Fig 1. Measure width

Fig 2. Measure length

Renegade Boots
\$150 each boot
 (\$300 pair)

 Mixing Tips \$1.25
 Vettec Adhere Glue Gun \$95
 In 8 Renegade colours

RENEGADE & VIPERS HOOF BOOTS

Renegade and Viper hoof boots are high performance boots, ideal for endurance, campdrafting or whatever you choose.

The width of your horse's hoof is what determines the size boot needed—the hoof width must be smaller than the boot width so the toe of the hoof sits in the front of the boot (if the hoof width stops the toe going in to the front of the boot you will likely experience twisting and possibly retention issues).

The boot length can be cut back by up to 10mm. To determine if a cut back is needed add 3-7mm to the hoof length measurement and take off the boot length given on the chart. Excess should be cut back to avoid the toe of the rear hoof getting a purchase on the sole of the boot and pulling it off, often destroying it.

The Viper boot has a deeper tread pattern and is lighter in weight making it perfect for the performance horse. Spare parts available such as straps, cables and linings & heel captivators available for both styles of boots.

The Renegade style can also be purchased with 5mm Gel lining or with up to 12 studs fitted. Both styles sold individually to accommodate variance in hoof sizes. Spare set of toe straps included with each pair of boots.

Viper Boots
\$160 each
 (\$320 pair)
 Length X Width in mm

120 x 110
125 x 115
125 x 120
125 x 125
